

Digital Master Control Panel

Slimmer, brighter, more powerful
The next generation in dock operations

Programmable Control System

Intuitive, simple, safe

The next step in the evolution of dock controls is here. Our next generation Master Control Panels employ a fully digital interface activated by a nearly indestructible HMI (Human Machine Interface) screen. An intuitive guided sequence of operations can be customized to operate any combination of dock equipment. Available as a retrofit or new installation.

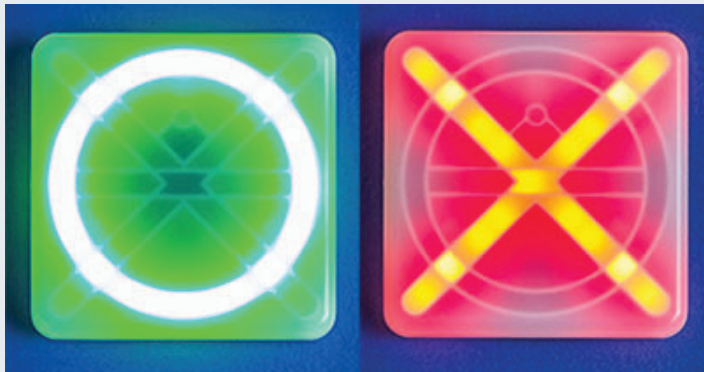

Re-imagined control panel

Employing new technology and new production techniques, we've completely re-imagined our master control panels to address those challenges while substantially increasing efficiency and ease of operation:

- ❖ Guided sequence of operations
- ❖ On-board data and diagnostics
- ❖ Intuitive graphic interface
- ❖ Password access and override
- ❖ Colour and shape status light
- ❖ Time-at-dock timer
- ❖ Not dependent on language
- ❖ Network integration ready

Programmable Control System

High visibility LED

Single LED light indicates presence of trailer, status of restraint

Flashes to indicate in-motion equipment like dock levellers and errors like a missed restraint

Brightness can be adjusted from digital panel

Shapes combined with colours ensures universal understanding

Advanced safe engagement signalling

We've reinvented our Master Control Panels literally from the inside out. A thinner casing profile – and removable PLC – means easier install, less clutter, and more room at each dock position.

The highly responsive, HMI panel's backlit digital display gives operators and administrators high visibility even in low light facilities.

The ultra-bright LED trailer presence light is unmistakable even by colour-blind individuals, utilizing shapes and flashes to indicate the presence of a trailer at the dock, status of the restraint, and other operations.

Advanced communications package for improved dock safety

The programmable controls support clear dock-to-driver communications with interior and exterior stop and go light signals as well as an exterior caution sign.

Further information

DOCK PRODUCTS BROCHURE

For more information about our full range of Dock Products, including popular items such as:

- Shelters
- Seals
- Wheel and Trailer Restraints
- Pit Box's
- Control Panels
- plus much more

DOCK LEVELLER BROCHURE

The Tieman Dock Leveller by Safetech is Australian designed and the most widely used Dock Leveller in Australia.

Used and proven by all major Australian retailers, transport and logistics companies.

Constant improvements have been made to keep our dock levellers ahead of the rest

ECO-SHELTER

Reduce the amount of thermal loss in your cold storage facility

Made from robust PVC coated Polyester, the Safetech Eco-Shelter provides a tight and secure seal around the edge of your refrigerated truck and cool environment reducing energy loss.
