

Workstation Platforms

Integrated In-line Auto System

Safetech lift tables are used in-line with auto systems. These lift tables are generally working a high pace 24/7 operation.

Some of the features generally required for these applications are; custom high cycle options including constant running power unit with upper and lower limits.

Customers can also choose to control the table with their own PLC applications, include in-line board feed system, dual pallet feed, air cons, food packaging and general warehouse.

End of Line Palletising

Lift tables are used at the ends of conveyor line where goods are being either decanted or palletised. These tables generally have a turntable, manual or powered, to assist the operation with the loading unloading of goods, combine these up/down indexing options so the operator only needs to tap the button.

Applications where pallets are made up of difference weights and heights, benefit from a hydraulic lift table due to the ability to position the platform at any height.

Safety features include safety bar around the perimeter of the table to stop decent if anything was to come in contact. Safety skirt to protect operator from scissor mechanism.

Applications include: Pharmaceutical, cold storage, Retail DC, warehousing, food.
